Overview of the Mitsubishi 4G15 Engine

Before diving into the specific parts, it's important to understand what the 4G15 engine entails. The 4G15 is a 1.5-liter, four-cylinder, SOHC (Single Overhead Camshaft) engine produced by Mitsubishi. Known for its simplicity and efficiency, it was commonly installed in various Mitsubishi Lancer models from the late 1980s through the early 2000s. Its straightforward design makes it accessible for repairs and parts replacement, a feature appreciated by owners and technicians alike.

This engine operates with a cast-iron block, aluminum cylinder head, and a single overhead camshaft that drives the valves directly via rocker arms. It features multi-point fuel injection in later models, contributing to better fuel efficiency and lower emissions.

Major Engine Parts of the Mitsubishi Lancer 4G15

The 4G15 engine comprises numerous components working harmoniously to deliver power. These parts can be broadly categorized into the engine block, cylinder head components, fuel system, ignition system, cooling system, lubrication system, and ancillary parts.

- Engine Block and Internal Components

a. Engine Block

The foundation of the engine, the block is made of cast iron for durability and heat resistance. It houses the cylinders, pistons, crankshaft, and other internal parts. The design ensures the proper alignment and support for the moving parts.

b. Pistons

Pistons are cylindrical components that move up and down within the cylinders, converting the combustion energy into mechanical motion. The 4G15 pistons are made from aluminum alloy to reduce weight and improve heat dissipation.

Key features:

- Piston rings (compression and oil rings): Seal the combustion chamber, control oil consumption, and transfer heat to the cylinder walls.
- Piston pins: Connect pistons to connecting rods.

c. Connecting Rods

These rods connect the pistons to the crankshaft, transmitting the force generated during combustion. Made from forged steel or cast iron, they must withstand high stress.

d. Crankshaft

The crankshaft converts the reciprocating motion of pistons into rotational motion. It is balanced to minimize vibrations and is equipped with counterweights for smooth operation.

e. Cylinder Liners (if present)

While the 4G15 typically uses a cast-iron block without replaceable liners, some variants might incorporate liners for easy maintenance.

- Cylinder Head Components

a. Cylinder Head

Mounted atop the engine block, it contains the combustion chambers, valves, and camshaft. The head is made from aluminum to facilitate heat dissipation.

b. Valves (Intake and Exhaust)

The 4G15 engine features four valves per cylinder—two intake and two exhaust valves—controlled by a single overhead camshaft. Valves open and close to allow air-fuel mixture intake and exhaust gases out.

Components include:

- Valve springs: Maintain valve closure.
- Valve retainers and keepers: Secure the springs.
- Valve seats: Seal against the cylinder head.

c. Camshaft

The SOHC design uses a single camshaft located in the cylinder head, which actuates the valves via rocker arms. It is driven by a timing belt or chain connected to the crankshaft.

d. Rocker Arms

Levers that transfer camshaft motion to open and close the valves.

e. Timing Belt/Chain

Synchronizes the rotation of the crankshaft and camshaft, ensuring proper valve timing. Regular inspection and replacement are crucial for engine performance.

- Fuel System Components

a. Fuel Injectors

Multi-point fuel injectors deliver fuel directly into the intake manifold or combustion chamber, improving efficiency and emissions.

b. Fuel Pump

Located in the fuel tank, it supplies pressurized fuel to the injectors.

c. Fuel Filter

Removes impurities from the fuel before it reaches the injectors, protecting sensitive components.

d. Throttle Body

Controls airflow into the engine, connected to the accelerator pedal. It contains the throttle valve and a throttle position sensor.

- Ignition System Parts

a. Spark Plugs

Ignite the air-fuel mixture within the cylinders. The 4G15 uses standard or iridium spark plugs depending on the model.

b. Ignition Coils

Transform the battery's voltage into a high-voltage spark. Each cylinder usually has its dedicated coil.

c. Distributor (if equipped)

In older models, the distributor directs high-voltage current to each spark plug in sequence. Some variants may employ distributor-less ignition systems.

- Cooling System Components

a. Radiator

Dissipates heat from the coolant circulated through the engine.

b. Water Pump

Circulates coolant through the engine and radiator. It is driven by the timing belt or a dedicated belt.

c. Thermostat

Regulates coolant temperature by opening or closing to control flow based on engine temperature.

d. Cooling Fans

Assist airflow through the radiator, especially when the vehicle is stationary.

- Lubrication System

a. Oil Pump

Circulates engine oil to lubricate moving parts, reducing wear and heat.

b. Oil Filter

Removes contaminants from engine oil to maintain lubrication quality.

c. Oil Pan

Stores engine oil at the bottom of the engine.

d. Oil Passages

Channels within the engine block and head for oil distribution.

- Ancillary and Supporting Parts

- Air Filter: Ensures clean air intake.

- Valve Cover: Seals the top of the cylinder head.

- Intake and Exhaust Manifolds: Direct air-fuel mixture into cylinders and exhaust gases out.
- Gaskets and Seals: Prevent leaks between various engine parts.
- Sensors: Including coolant temperature sensors, oxygen sensors, and others for engine management.

Maintenance and Replacement Considerations

Given the age and design of the 4G15 engine, regular maintenance of these parts is essential to sustain performance. Common replacements include:

- Timing belt: Usually replaced every 60,000 to 100,000 km.
