The diagram shows a compact inline-4 configuration, aligned vertically. The cylinders are precision-machined bores within the aluminum block, with pistons connected via connecting rods to the crankshaft.

Crankshaft and Timing Components

- Located at the bottom of the engine block.
- The crankshaft converts pistons' reciprocating motion into rotational energy.
- Timing belt or chain synchronizes camshaft rotation with the crankshaft for valve timing.

Camshaft(s) and Valve Operation

- The diagram indicates dual overhead camshafts (DOHC), one for intake valves and one for exhaust valves.
- Variable Valve Timing (VVT) actuators are shown on the camshaft, enabling dynamic adjustment of valve timing for power and efficiency.

Fuel Injection and Combustion Chamber

- Direct injection nozzles are positioned to spray fuel directly into each cylinder.
- The combustion chamber's shape, designed for optimal airflow and flame propagation, is depicted in the diagram.

Intake and Exhaust Pathways

- Intake manifolds distribute air to each cylinder.
- Exhaust manifolds collect gases after combustion and route them through catalytic converters.

Ancillary Components

- Oil filter, alternator, power steering pump, and other accessories are connected via belt systems.
- The diagram indicates belt routing and tensioner placement.
