At the heart of financial accounting lie fundamental principles that guide the preparation and presentation of financial statements. These principles ensure consistency, comparability, and reliability in financial reporting.

Generally Accepted Accounting Principles (GAAP)

GAAP encompasses a set of rules and conventions that companies adhere to when preparing financial statements. It includes principles such as:

- Accrual Principle: Revenues and expenses are recognized when they are incurred, not when

cash is received or paid.

- Consistency Principle: The same accounting methods are used across periods to ensure comparability.
- Materiality Principle: Only significant information that could influence decision-making is reported.
- Conservatism Principle: When in doubt, choose the option that results in lower profits or asset values to avoid overstatement.

Core Concepts

- Entity Concept: Business transactions are separate from personal transactions of owners.
- Money Measurement Concept: Only transactions measurable in monetary terms are recorded.
- Accounting Period Concept: Financial statements are prepared for specific periods, such as monthly, quarterly, or annually.
- Going Concern Concept: Assumes that the business will continue to operate indefinitely unless there is evidence to the contrary.

The Accounting Cycle: Step-by-Step Process

The accounting cycle defines the sequential steps involved in recording and summarizing financial data for a specific period. Understanding this cycle is essential for students as it forms the procedural backbone of financial accounting.

Stages of the Accounting Cycle

- Identification and Analysis of Transactions: Recognize economic events affecting the business.
- Journalizing Transactions: Record transactions in the journal using appropriate debits and credits.
- Ledger Posting: Transfer journal entries to respective ledger accounts.
- Trial Balance Preparation: Summarize all ledger balances to verify the equality of debits and credits.
- Adjusting Entries: Make necessary adjustments for accrued and deferred items.
- Adjusted Trial Balance: Prepare after adjustments to ensure accuracy.
- Financial Statements Preparation: Generate Income Statement, Balance Sheet, and Cash Flow Statement.
- Closing Entries: Close temporary accounts to retained earnings at the end of the period.
- Post-Closing Trial Balance: Ensure all accounts are correctly balanced post-closing.

Types of Financial Statements

The primary outputs of financial accounting are various financial statements, each serving a specific purpose.

Balance Sheet (Statement of Financial Position)

This statement provides a snapshot of a company's assets, liabilities, and equity at a particular date. It follows the fundamental accounting equation:

$$\text{Assets} = \text{Liabilities} + \text{Equity}$$

Components:

- Assets: Current (cash, receivables, inventory) and non-current (property, plant, equipment)
- Liabilities: Current (accounts payable, short-term loans) and long-term (bonds payable, long-term loans)
- Equity: Owner's capital, retained earnings, reserves

Income Statement (Profit and Loss Account)

Displays revenues earned and expenses incurred over a period, resulting in net profit or loss.

Key Elements:

- Revenue from sales or services
- Cost of Goods Sold (COGS)
- Operating expenses (salaries, rent, utilities)
- Other income and expenses
- Net profit or loss

Cash Flow Statement
