This comprehensive guide aims to serve as a detailed manual for Daihatsu Rocky owners and technicians seeking to understand, maintain, and service the gearbox effectively.

Understanding the Daihatsu Rocky Gearbox

Types of Gearboxes Used in the Daihatsu Rocky

The Daihatsu Rocky typically comes equipped with either a manual transmission or an automatic transmission, depending on the model year and market specifications.

A typical Daihatsu Rocky gearbox comprises several key parts:

- Gear sets and synchronizers
- Shift forks and rails
- Clutch assembly (manual) or torque converter (automatic)
- Gearbox casing
- Lubrication system (gear oil, seals, and filters)

Having a clear understanding of these components helps in diagnosing issues and performing

effective maintenance.

Preparing for Gearbox Service

Tools and Equipment Needed

Before starting the service, gather the necessary tools for safe and efficient work:

- Socket and wrench sets
- Screwdrivers (flathead and Phillips)
- Gearbox fluid pump
- Drain pan and containers for old oil
- Replacement gear oil (as specified in the manual)
- Sealant and replacement seals (if needed)
- Jack and jack stands or ramps

Proper preparation minimizes risks and ensures that the service is thorough.

Safety Precautions

Always prioritize safety when working on the vehicle:

- Ensure the vehicle is parked on a flat, stable surface.
- Use wheel chocks to prevent movement.

- Disconnect the battery to prevent electrical hazards.
- Wear appropriate personal protective equipment.

Following these precautions reduces the chances of accidents and injuries.

Step-by-Step Guide to Gearbox Oil Change

Drain the Old Gear Oil

- Warm up the engine and gearbox by driving the vehicle for a few minutes. Warm oil drains more completely.
- Raise the vehicle securely using a jack and stands.

- Locate the gearbox drain plug, usually at the bottom of the casing.
- Place a drain pan beneath the plug.
- Unscrew the drain plug carefully and allow the old oil to flow out completely.
- Once drained, replace the drain plug tightly to prevent leaks.

Refill with New Gear Oil

- Locate the gearbox fill plug, typically at the side of the casing.
- Using a gear oil pump, fill the gearbox with the manufacturer-recommended type and quantity of gear oil.
- Fill until the oil starts to overflow from the fill hole, indicating it's full.
- Replace the fill plug securely.
- Lower the vehicle and run the engine briefly to circulate the new oil.
- Recheck the oil level and top off if necessary.

Inspecting and Replacing Gearbox Seals and Components

Identifying Seal Leaks and Wear

Leaking seals are common indicators of aging or damage:

- Inspect the gearbox casing and around the shift mechanisms for oil seepage.
- Check the clutch housing (manual) or torque converter area for leaks.
- Look for signs of gear grinding or unusual noises during operation.
