Components of an Irrigation System

Understanding the basic components is crucial for creating accurate drawings:

- Source of water (e.g., well, river, reservoir)
- Intake structures
- Main supply channels or pipelines
- Secondary or distributary channels
- Laterals or sub-main pipelines
- Field outlets or outlets
- Control structures (e.g., sluice gates, valves)
- Drainage systems (if applicable)

Types of Irrigation Systems Covered in 5th Semester

1. Surface Irrigation

This traditional method involves distributing water over the soil surface by gravity. Common types include basin, border, and furrow irrigation.

2. Drip Irrigation

A precise method where water drips directly to the root zone of plants through emitters.

3. Sprinkler Irrigation

Water is sprayed over the land similar to natural rainfall using a system of pipes and sprinklers.

4. Center Pivot Systems

A large mechanized system rotating around a pivot point, covering circular areas efficiently.

5. Modern Automated Systems

Includes combination systems and computer-controlled irrigation for optimized water management.

Understanding these systems enables students to learn to draw their layouts accurately, considering the specific requirements of each type.

Standard Symbols and Conventions in Irrigation Drawing
