Sample Guided Practice Problem and Detailed Solution

Problem:

Given the reaction: $2\text{H}_2 + \text{O}_2 \rightarrow 2\text{H}_2\text{O}$, how many grams of water are produced when 4 grams of hydrogen gas react with excess oxygen?

Solution Steps:

- Identify knowns:
- Mass of H_2 = 4 grams
- Excess O_2 (meaning O_2 is not limiting)

- Write the balanced chemical equation:
- $2\text{H}_2 + \text{O}_2 \rightarrow 2\text{H}_2\text{O}$
- Convert grams of hydrogen to moles:
- Molar mass of $\text{H}_2 = 2.02\text{ g/mol}$
- Moles of $\text{H}_2 = 4\text{ g} \div 2.02\text{ g/mol} = 1.98\text{ mol}$
- Use mole ratio from the balanced equation:
- 2 mol H_2 produce 2 mol H_2O
- Moles of H_2O produced = 1.98 mol (since ratio is 1:1)
- Convert moles of water to grams:
- Molar mass of $\text{H}_2\text{O} = 18.02\text{ g/mol}$
- Grams of $\text{H}_2\text{O} = 1.98\text{ mol} \times 18.02\text{ g/mol} = 35.7\text{ grams}$

Answer: Approximately 35.7 grams of water are produced.

These test understanding of principles, such as the nature of different reaction types or the significance of reaction coefficients.

Example:

What distinguishes a synthesis reaction from a decomposition reaction?

Answer:

A synthesis reaction involves two or more reactants combining to form a single product, e.g., $A + B \rightarrow AB$. A decomposition reaction involves a single compound breaking down into simpler substances, e.g., $AB \rightarrow A + B$.

- Balancing Chemical Equations

Students must accurately balance chemical equations to satisfy the law of conservation of mass.

Sample Problem:

Balance the following equation:

Sample Answer:

- Predicting Products

Given a reaction, students predict the products based on reaction types and chemical principles.

Example:

Predict the products of sodium chloride reacting with silver nitrate solution.

Answer:

The products are silver chloride (AgCl) precipitate and sodium nitrate (NaNO₃) in solution. The balanced molecular equation:

- Stoichiometry Calculations

These involve molar relationships, limiting reagents, and yield calculations.

Sample Question:

How many grams of water are produced when 10 grams of hydrogen gas react with excess oxygen?

Answer:

First, write the balanced equation: $2\text{H}_2 + \text{O}_2 \rightarrow 2\text{H}_2\text{O}$

Calculate moles of H₂:

$$\text{Moles H}_2 = 10 \text{ g} / 2.016 \text{ g/mol} = 4.96 \text{ mol}$$

From the balanced equation, 2 mol H₂ produce 2 mol H₂O, so 4.96 mol H₂ produce 4.96 mol H₂O.

$$\text{Mass of H}_2\text{O} = 4.96 \text{ mol} \times 18.015 \text{ g/mol} = 89.5 \text{ g}$$

- Energy and Thermodynamics

Questions may involve calculating energy changes, activation energy, or enthalpy effects during reactions.

Understanding the Context of Pearson Chemistry Guided Practice Problem 14

Before diving into the solution, it's important to grasp what this problem typically involves and why it's significant.

What Is Pearson Chemistry Guided Practice Problem 14?

Pearson Chemistry Guided Practice Problem 14 is usually designed to assess your understanding of a specific chemistry concept, such as:

- Stoichiometry and mole conversions
- Balancing chemical equations
- Calculating molar masses
- Determining limiting reactants
- Calculating theoretical and actual yields
- Understanding solution concentrations (molarity)

While the exact content of problem 14 varies depending on the edition, it generally involves applying

multiple concepts in a multi-step problem.

The Importance of Guided Practice Problems in Chemistry

Guided practice problems serve as an essential tool for mastering complex concepts. They offer structured steps, hints, and explanations that help students develop problem-solving skills. These problems reinforce learning, improve critical thinking, and prepare students for real-world applications and exams.

Step-by-Step Approach to Solving Pearson Chemistry Guided Practice Problem 14

Successfully tackling problem 14 requires a systematic approach. Below is a detailed, step-by-step method tailored to most typical problems of this type.

1. Carefully Read and Understand the Problem

Start by thoroughly reading the problem statement. Identify what is being asked and note all given data, including:

- Masses of reactants or products
- Concentrations or volumes of solutions
- Temperatures or pressures, if relevant

Highlight or underline key information. Clarify what the problem is asking you to find?be it the amount of product formed, the limiting reagent, or the percent yield.

2. Write the Balanced Chemical Equation

A balanced equation is crucial as it provides the molar ratios needed for calculations. To balance:

- Identify the reactants and products
- Use coefficients to balance atoms on both sides
- Double-check the balance for accuracy

Accurate balancing ensures correct molar relationships throughout the problem.

3. Convert Given Data into Moles

Most problems involve converting measurements into moles:

- If given masses, use molar mass to convert to moles
- If given volume and molarity, use the relation: $\text{moles} = \text{molarity} \times \text{volume (in liters)}$
- Ensure units are consistent

This step forms the basis for all subsequent calculations.

4. Determine the Limiting Reactant (if applicable)

In reactions involving multiple reactants, identifying the limiting reagent is vital:

- Compare the mole ratios of reactants based on the balanced equation
- Calculate the amount of product each reactant can produce
- The reactant that produces the least amount of product is the limiting reactant

Understanding which reactant limits the reaction helps in calculating the maximum possible yield.

5. Calculate the Theoretical Yield

Using the limiting reagent:

- Use mole ratios from the balanced equation to find the moles of desired product
- Convert moles of product to grams or other units as needed

This gives you the maximum amount of product obtainable under ideal conditions.

6. Calculate Actual Yield and Percent Yield (if data provided)

If the problem provides actual yields:

- Use the theoretical yield to determine the percent yield: $\text{Percent Yield} = (\text{Actual Yield} / \text{Theoretical Yield}) \times 100\%$
- Analyze the efficiency of the reaction based on this value

This step helps in understanding reaction efficiency and practical considerations.

Overview of Pearson Chemistry Guided Practice Problem 14

While the exact wording of Problem 14 can vary depending on the edition, it generally pertains to core topics in chemistry such as mole calculations, balancing chemical equations, or analyzing reaction mechanisms. For illustrative purposes, consider an example problem along these lines:

"Calculate the mass of aluminum oxide (Al_2O_3) produced when 50 grams of aluminum (Al) reacts completely with oxygen (O_2)."

This problem encapsulates several key concepts:

- Stoichiometry
- Limiting reactants
- Mass-to-mole conversions

By exploring this problem, students can refine their skills in interpreting chemical equations and performing quantitative analyses.

Breaking Down the Problem: Step-by-Step Approach

- Identify the Relevant Chemical Equation

The first step involves writing the balanced chemical reaction:

This equation indicates that 4 moles of aluminum react with 3 moles of oxygen to produce 2 moles of aluminum oxide.

- Convert Given Quantities to Moles

Given: 50 grams of aluminum.

Using the molar mass of aluminum ($\text{Al} \approx 26.98 \text{ g/mol}$):

$$\text{Moles of Al} = \frac{50\text{ g}}{26.98\text{ g/mol}} \approx 1.85\text{ mol}$$

- Determine the Moles of Aluminum Oxide Produced

From the balanced equation, the molar ratio of Al to Al_2O_3 is 4:2, which simplifies to 2:1.

Thus:

$$\text{Moles of Al}_2\text{O}_3 = \frac{1.85\text{ mol Al}}{2} \times 2 = 0.925\text{ mol}$$

- Convert Moles of Aluminum Oxide to Mass

The molar mass of Al_2O_3 :

$$(2 \times 26.98) + (3 \times 16.00) = 101.96\text{ g/mol}$$

Therefore:

$$\text{Mass of Al}_2\text{O}_3 = 0.925\text{ mol} \times 101.96\text{ g/mol} \approx 94.4\text{ g}$$

Final Answer: Approximately 94.4 grams of aluminum oxide are produced.
