Performance Data: Unlocking the A36’s Capabilities

One of the most frequently referenced sections of the POH is the performance data, which enables pilots to plan flights effectively and operate within safe margins.

Key Performance Figures

| Parameter | Typical Values (Sea Level, Standard Conditions) |

|---|---|

| Maximum Cruise Speed | 176 knots (204 mph) at 75% power |

| Cruise Speed (Economical) | 165 knots (~190 mph) at lower power settings |

| Stall Speed (Clean) | 61 knots (with flaps up), 55 knots (with flaps down) |

| Maximum Takeoff Weight | 3,650 lbs (1,657 kg) |

| Maximum Landing Weight | 3,650 lbs (1,657 kg) |

| Fuel Capacity | 92 gallons (approx. 88 usable gallons) |

| Range | Approximately 700 nautical miles with reserves |

Takeoff and Landing Data

- Ground Roll: Typically around 1,200 to 1,400 feet, depending on weight, temperature, and surface conditions.
- Takeoff Distance (Over 50 ft obstacle): Usually between 2,000 to 2,300 feet.
- Landing Roll: Approximately 1,200 feet, with full flaps.

Climb Performance

- Climb Rate: Up to 1,200 feet per minute at sea level under standard conditions.
- Best Rate of Climb Speed (Vy): 107 knots.

These figures are vital for pilots to assess whether the aircraft can safely operate from a given runway or in specific weather conditions. The POH also provides correction factors for altitude, temperature, and aircraft loading, ensuring precise planning.

Operating Procedures for the Beech Bonanza A36

The POH details step-by-step procedures to ensure safe and efficient operation, from pre-flight checks to post-landing routines.

Pre-Flight Inspection

- Check fluid levels (oil, hydraulic, fuel).
- Inspect tires and brakes.
- Verify control surface freedom.
- Confirm avionics and instruments are functional.
- Review weather and NOTAMs.

Engine Start and Taxi

- Follow manufacturer-recommended starting procedures.
- Perform magneto checks and oil pressure confirmation.
- Taxi at reduced power to ensure steering and brakes are effective.

Takeoff Procedure

- Apply full throttle smoothly.
- Use appropriate runway length, considering aircraft weight and environmental factors.

- Rotate at the recommended airspeed (V_r), generally around 80 knots.
- Climb out with a positive rate of climb and retract flaps as specified.

Cruise Operations

- Maintain assigned cruise power settings.
- Monitor engine instruments regularly.
- Use autopilot if available for steady flight and fuel efficiency.

Descent and Landing

- Plan descent to arrive at the destination altitude with adequate fuel.
- Configure approach with appropriate flap settings.
- Maintain stabilized approach, aiming for a descent rate of less than 500 ft/min.
- Flare at the correct height and land within the calculated distance.

Post-Flight

- Shut down engines following proper procedures.
- Secure aircraft, checking for leaks and securing all panels.

Safety Considerations and Limitations

The POH emphasizes the importance of respecting aircraft limitations and environmental factors:

- **Airspeed Limits:** Never exceed V_{ne} (Never-Exceed Speed) of 202 knots.
- **Weight Restrictions:** Do not operate beyond maximum gross weight.
- **Environmental Limits:** Avoid operations in known turbulence or severe weather beyond certified limits.
- **System Limitations:** Adhere to electrical and hydraulic system constraints.

In addition, the manual underscores the importance of continuous training, adherence to checklists, and situational awareness to ensure safety.

Maintenance and Inspection Schedules

The POH outlines routine maintenance intervals based on hours flown and calendar time:

- 100-Hour Inspection: Required for aircraft used for hire or flight training.
- Annual Inspection: Every 12 calendar months.
- Engine Overhaul: Typically around 2,000 hours or 12 years, whichever comes first.
- ADs (Airworthiness Directives): Must be followed diligently as issued by authorities.

Proper maintenance ensures performance parameters remain within specified ranges, preserving the aircraft's safety and longevity.

Advanced Features and Modifications

The Beechcraft A36 has evolved with various modifications and optional systems, such as:

- Avionics Upgrades: Glass cockpit systems like Garmin G1000.
- Engine Variations: Upgraded engines for better performance or efficiency.
- Interior Refurbishments: Modernized cabins for comfort.

The POH is updated to reflect these modifications, providing specific procedures and limitations for aircraft configurations.
