Liquid Penetrant Testing (LPT)

Liquid penetrant testing detects surface-breaking defects by applying a liquid dye or fluorescent dye that seeps into cracks, which can then be visualized under specific lighting.

- Suitable for complex geometries
- Simple and cost-effective

Eddy Current Testing (ECT)

Eddy current testing utilizes electromagnetic induction to detect flaws and measure material properties, particularly in conductive materials.

- Fast and capable of rapid scanning
- Primarily used for surface and near-surface defects
