Question What are the key components to check during a backhoe daily inspection? **Key** components include the hydraulic system, tires or tracks, bucket attachment, engine oil level, coolant level, hydraulic fluid, brakes, lights, and safety features such as alarms and warning decals. **Why is it important to perform a daily inspection on a backhoe?** Daily inspections help identify potential safety hazards and mechanical issues early, preventing accidents, reducing downtime, and ensuring the equipment operates efficiently. **What safety precautions should be taken before starting a backhoe inspection?** Ensure the equipment is on a stable surface, turn off the engine, disconnect the battery if necessary, wear appropriate PPE, and follow lockout/tagout procedures to prevent accidental startup. **How often should hydraulic fluid levels be checked during daily inspections?** Hydraulic fluid levels should be checked at the start of each shift or daily inspection to ensure proper operation and prevent system damage. **What signs indicate that a backhoe's tires or tracks need maintenance or replacement?** Signs include visible wear, cracks, punctures, uneven tire pressure, or track damage, which can affect stability and safety. **What should be included in a backhoe's daily inspection checklist regarding safety features?** Check that all safety decals are visible, warning alarms are functioning, seat belts are in good condition, backup alarms work, and emergency

shutdown systems are operational. How can you ensure the backhoe's attachments, such as the bucket, are in proper working condition? Inspect for cracks, wear, or damage, verify that attachment pins and locks are secure, and ensure hydraulic hoses and cylinders are free of leaks and corrosion. What are the common signs of hydraulic leaks during a daily inspection? Visible fluid leaks, puddles under the machine, decreased hydraulic performance, or a drop in hydraulic fluid levels are common signs of leaks. What should be done if a defect or safety issue is identified during the daily inspection? The equipment should be taken out of service immediately, the defect should be documented, and qualified personnel should repair the issue before operation resumes.
