Step-by-Step Guide to Delphi Injection Pump Timing on Perkins 3.9

The following steps outline a comprehensive approach, assuming the engine is already disassembled to the point of exposing the injection pump and timing marks.

1. Identify and Mark Timing Points

- Locate the crankshaft pulley and identify the TDC (Top Dead Center) mark.
- Use a dial gauge or a piston stop tool to confirm TDC on Cylinder 1.
- Mark the position of the harmonic balancer or pulley relative to the timing scale.

2. Set the Crankshaft to TDC

- Rotate the engine clockwise using a wrench on the crankshaft pulley bolt.
- Align the TDC mark with the pointer.
- Verify TDC by inserting a piston stop or dial gauge into Cylinder 1 to confirm the piston reaches top dead center.

3. Prepare the Injection Pump

- Remove the pump's retaining bolts carefully.
- Note the original position if the pump is being re-timed.
- If installing a new or remanufactured pump, ensure it is set to the initial timing position as specified by Perkins or Delphi.

4. Align the Pump Drive Gear
